- All the beauty of enamel surfaces with no fear of chipping or marring
- Impenetrable acrylic density

*The kitchen can be a fertile breeding ground for microbes like bacteria, mold and mildew. In fact, if left unchecked bacteria levels can double in number every 20 minutes. It's a constant battle especially in high humidity and moisture areas like the kitchen. Microban protection fights the growth of microbes that can cause stains and odors on kitchen surfaces, so they're easier to clean and stay cleaner and fresher between cleanings. And because Microban protection is built-in, it won't wash off or wear away providing continuous antimicrobial protection for the life of the product.*
