

Tub Wall Filler Installation Guide

This bathroom fixture has been carefully engineered to provide a long, trouble-free service life under normal usage. It has been factory-tested and is ready for installation. We suggest this fixture be installed by a qualified licensed plumber so the warranty will remain in affect (refer to the "General Information" insert for warranty information). We also strongly recommend tub & hardware be on site prior to rough in.

- Shut off the water supply valves before installation.
 - Please use Teflon tape on all threaded connections available at your local hardware or plumbing supply.
 - Installations can vary depending on how previous fixtures were installed. Not all necessary supplies to install your faucet are included; however, they are available wherever plumbing supplies are sold.
1. Remove the supply nuts and lock nuts from back of faucet and insert faucet through the faucet hole drillings of the tub. Screw the lock nuts onto the threaded shanks and tighten.
 2. Insert supply tubes into the shanks and tighten using washers & supply nuts.
